

- Purpose -
Religious behavior tracking app to let users track their daily religious activity, view its progression and compare it with other users anonymously

Sections

Prayer tracker
Users can choose one of the 5 or 7 prayers and a popover will offer them different prayer choices (alone, at mosque, missed, etc)

Quran tracker
Users set the Surah name and number of verses read on each day

Charity tracker
Users can toggle if they gave charity that day or not

Fasting tracker
Users can mark a day as having fasted and choose from different options (mandatory, voluntary, make-up)

Note: girls don't have to pray when on their period, so we need to let the user set their sex and offer an option when set to female to indicate that they are not praying

Modes

Portrait mode is the standard data entry and itemized viewing mode

landscape mode displays a graph showing the progression of the user's religious activities
